

1. Authentication

Method	Endpoint	Auth	Input	Output	
POST	<code>/api/auth/register</code>	✗	username, email, password	user created	
POST	<code>/api/auth/login</code>	✗	email, password	access token + refresh cookie	
POST	<code>/api/auth/refresh</code>	Refresh Cookie	—	new access token + new refresh cookie	
POST	<code>/api/auth/logout</code>	Refresh Cookie	—	logout success	
POST	<code>/api/auth/logout-all</code>	Access Token	—	all sessions revoked	

2. Organization

Method	Endpoint	Auth	Input	Output	
POST	<code>/api/organizations</code>	✓	name	created organization + invite code	
GET	<code>/api/organizations</code>	✓	—	user's organizations	
GET	<code>/api/organizations/:organizationId</code>	✓	URL param	organization details	
PATCH	<code>/api/organizations/:organizationId</code>	✓ Admin	name	updated organization	
DELETE	<code>/api/organizations/:organizationId</code>	✓ Admin	URL param	deleted	

Important: `createdBy` frontend se nahi aayega. Backend `req.user` se lega.

3. Organization Members

Method	Endpoint	Auth	Input	Output	
POST	/api/organizations/join	✓	inviteCode	membership created	
GET	/api/organizations/:organizationId/members	✓ Member	—	members list	
PATCH	/api/organizations/:organizationId/members/:userId	✓ Admin	role	updated role	
DELETE	/api/organizations/:organizationId/members/:userId	✓ Admin	—	member removed	

4. Project

Method	Endpoint	Auth	Input	Output	
POST	/api/organizations/:organizationId/projects	✓ Admin	name, description, status, startDate, dueDate	created project	
GET	/api/organizations/:organizationId/projects	✓ Member	—	accessible projects	
GET	/api/projects/:projectId	✓ Project Member	—	project details	
PATCH	/api/projects/:projectId	✓ Admin	fields to update	updated project	
DELETE	/api/projects/:projectId	✓ Admin	—	deleted	

5. Project Members

Method	Endpoint	Auth	Input	Output	
POST	<code>/api/projects/:projectId/members</code>	✓ Admin	userId	member assigned	
GET	<code>/api/projects/:projectId/members</code>	✓ Project Member	—	project members	
DELETE	<code>/api/projects/:projectId/members/:userId</code>	✓ Admin	—	member removed	

Backend assignment ke time:

```
userId    → request se  
assignedBy → req.user  
assignedAt → current time
```

Yaani `assignedBy` frontend se **nahi** bhejega.

6. Tasks

Method	Endpoint	Auth	Input	Output	
POST	<code>/api/projects/:projectId/tasks</code>	✓ Project Member	title, description, assignedTo, priority, dueDate	created task	
GET	<code>/api/projects/:projectId/tasks</code>	✓ Project Member	—	project tasks	
GET	<code>/api/tasks/:taskId</code>	✓ Project Member	—	task details	
PATCH	<code>/api/tasks/:taskId</code>	✓ Project Member	title, description, priority, status, dueDate	updated task	
PATCH	<code>/api/tasks/:taskId/assign</code>	✓ Admin	assignedTo	task reassigned	
DELETE	<code>/api/tasks/:taskId</code>	✓ Admin	—	deleted	

`createdBy` bhi frontend se nahi aayega:

```
createdBy → req.user
```

Aur `assignedTo` ko backend verify karega ki woh **us project ka ProjectMember** hai.
